## STERILE EXAMINATION GLOVES SERIOUSLY SAFE IN CRITICAL ENVIRONMENTS

# STERILE EXAMINATION GLOVES

## Seriously safe in critical environments

sempercare® sterile examination gloves are always a safe choice when it comes to effectively caring for wounds, traumatic injuries or burns and many other uses requiring sterile gloves.

## Product features

Our three sterile examination gloves, the sempercare® velvet, sempercare® nitrile and sempercare® edition IC, are great options for professionals looking for a sterile glove. They also provide different choices regarding material, color, texture and wall thickness to suit your specific needs. Of course, all are easy to don, comfortable to wear, possess a good grip and high tactile sensitivity, and – most importantly – have been gamma sterilised after packaging.

## New packaging features

The pair-packed sterile examination gloves come in a convenient pocket-sized peel pouch that:

- ✓ consists of full-foil material and is therefore more durable than paper packaging
- ✓ is easy to open thanks to the optimised geometry of the opening flap
- ✓ protects the gloves from external hazards like moisture
- ✓ is gas-tight and reduces the risk for ozone damages of the gloves

### TWICE CERTIFIED PROTECTION

All sterile sempercare® gloves are certified as medical devices in accordance with Medical Device Regulation (EU) 2017/745, and fulfill all parts of EN 455. Moreover, they are also certified as Personal Protective Equipment in accordance with the new Regulation (EU) 2016/425. This means that our sterile sempercare® gloves can be used for a wide range of uses.

### sempercare® Product Portfolio 2-Times Certified Protection

certified according to the Medical Device Regulation

certified according to the Personal Protective Equipment Regulation

## Recommended usage

Designed for critical environments that require a sterile glove, but not necessarily a surgical glove, sempercare® sterile examination gloves are appropriate for use in these particular professional settings:

HOSPITAL

DENTAL PROCEDURES

GYNECOLOGY PROCEDURES

PRIMARY CARE AND NON-INVASIVE PHYSICAL EXAMINATIONS

MATERNITY CLINIC

ANIMAL HEALTH

## Cancer treatment: Additional recommended usage for sempercare® nitrile sterile and sempercare® velvet sterile

Our Nitrile examination gloves has been tested for use with certain chemotherapy drugs (cytotoxics). The latest chemical resistance list can be found here:

## Time & cost-effective solutions

Our sterile examination gloves can be worn over surgical gloves during surgery preparation and can then be easily removed, avoiding time-intensive intra-operative glove changes. Sterile examination gloves are also a very cost effective option for non-surgical procedures that require a sterile environment.

## Improved Logistics

The EAN128 barcode on dispenser boxes and transport cartons allows for easier tracking of products and includes the lot number and expiry date.

## SAFETY FIRST

We care deeply about the quality and safety of our products. All our manufacturing plants are subject to strict quality controls and our quality management system is certified according to ISO 9001 and ISO 13485 and is regularly inspected by TÜV Süd. Our sterile examination gloves are sterilised after packing by means of radiation treatment. The quality assurance system that covers all aspects concerned with securing and maintaining sterile conditions in accordance with the requirements of the MDR is further confirmed by the Certification Body of TÜV Süd and subject to periodical surveillance.
